

Network Acceleration XDF 2018

Ravi Sunkavalli
VP, DC & IP Design Solutions

Agenda

- > Networking Industry Trends
- > Network Acceleration Platform & Usecases
- > Key enabling IP, Tools & Technology

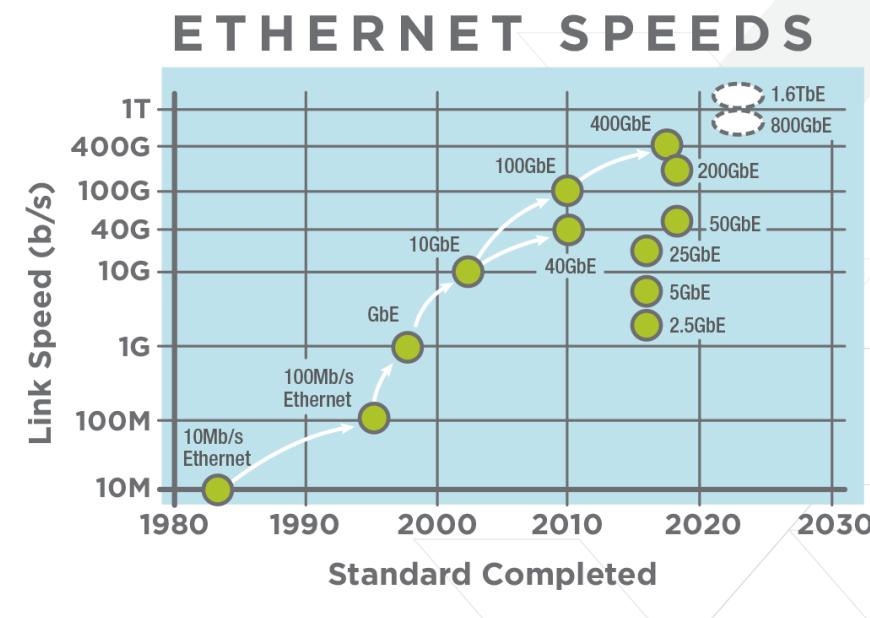

Server Networking Trends

Data rates increasing rapidly

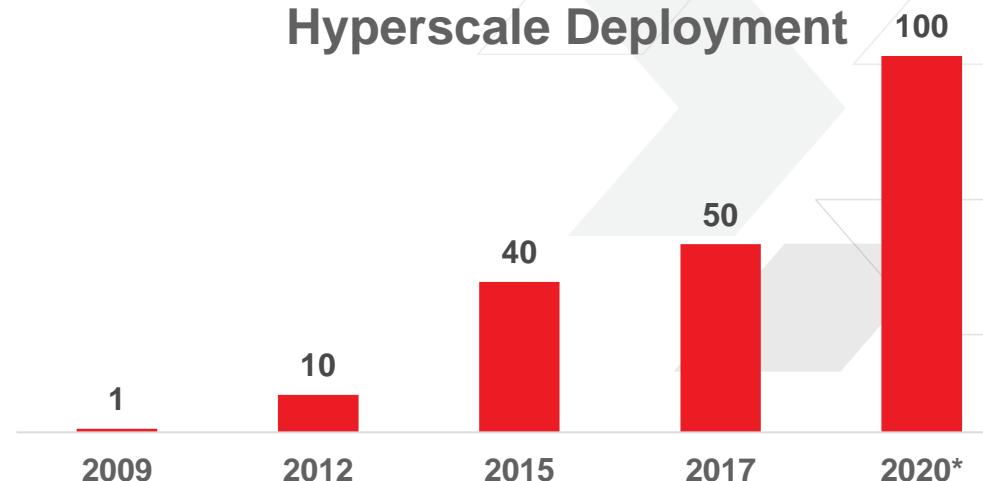

CPU Performance not scaling

Virtualization & Bare Metal

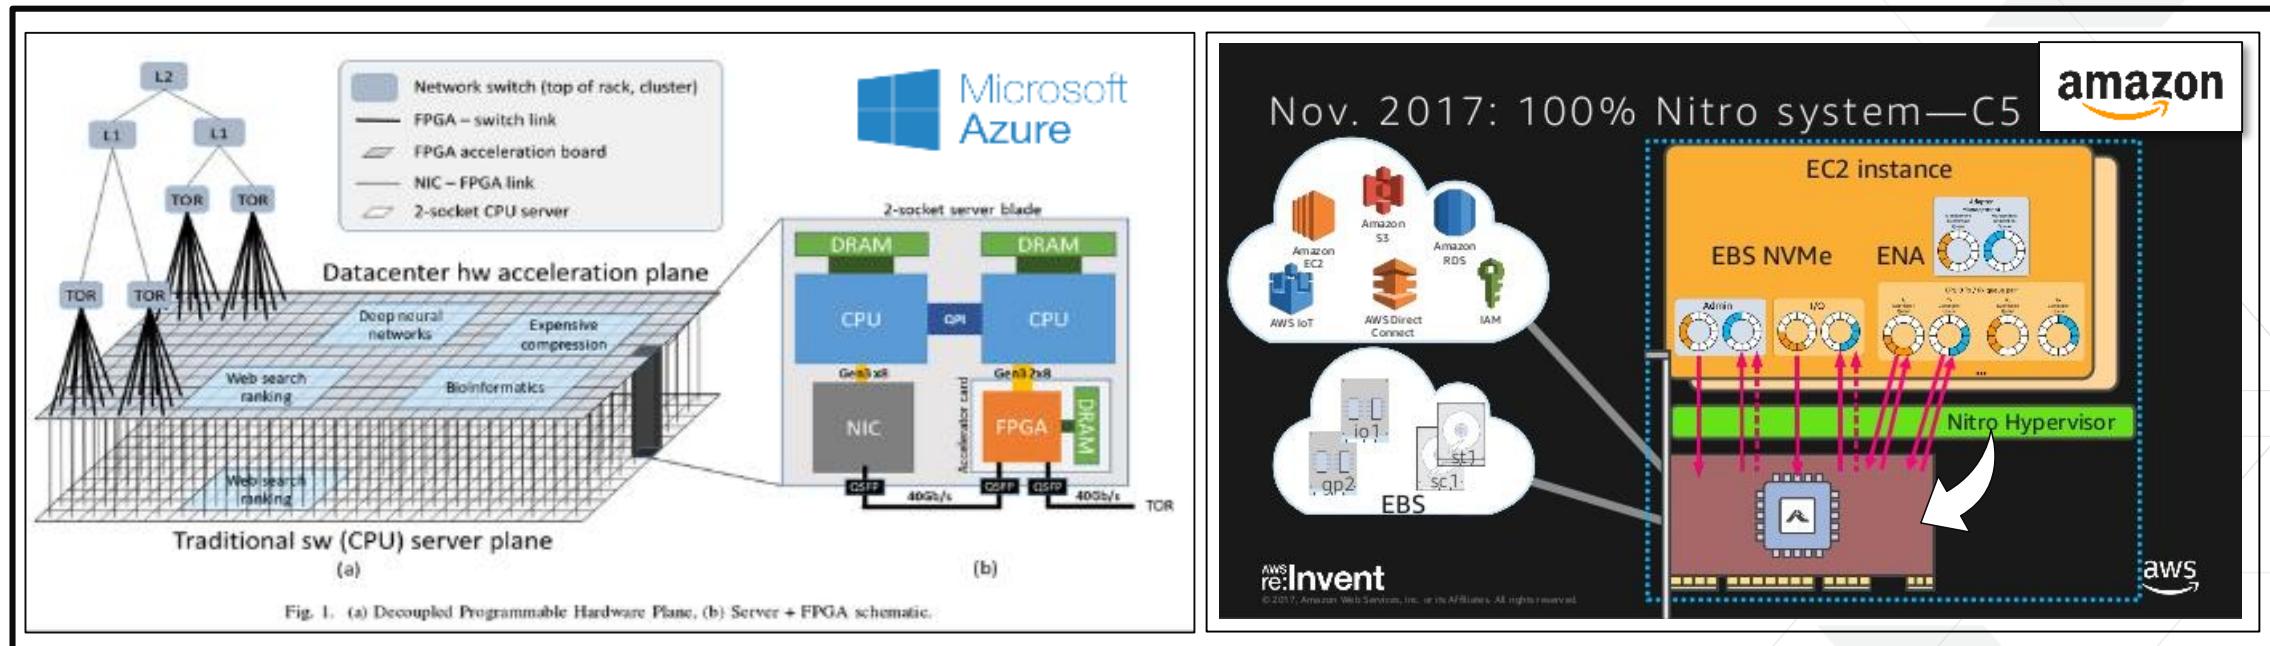

High Feature Velocity

NIC Speed (Gbps)
Hyperscale Deployment

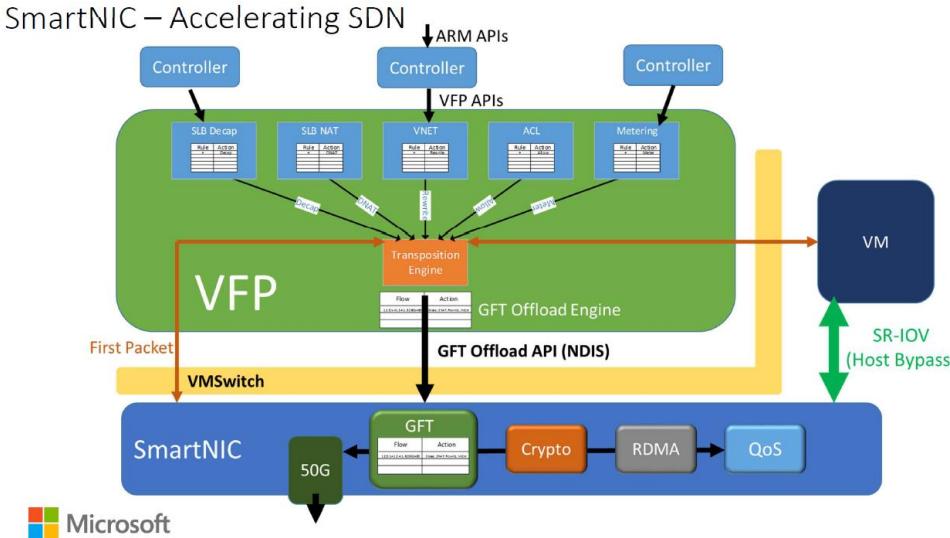

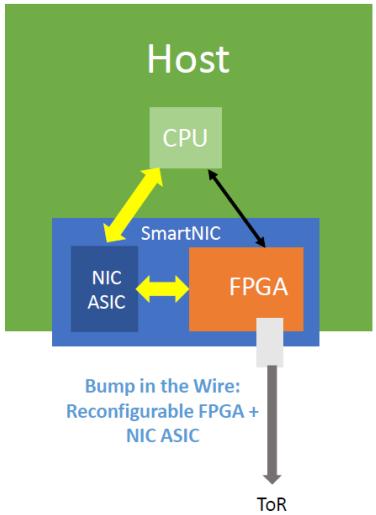

SmartNICs in Hyperscale Cloud

- > Amazon Nitro, Microsoft Azure SmartNIC in every server (>2 million deployed)
- > Use cases evolving, need for reconfigurable acceleration
- > Cloud service providers want new efficiencies with the decline of Moore's Law
- > Storage and compute acceleration in the NIC

Virtualization and BareMetal trend favors FPGAs

Microsoft Azure SmartNIC

- > FPGA enables support for >50Gbps networking
- > Microsoft leadership for FPGA adoption
- > Hyperscale deployment (>1M)

Azure Accelerated Networking:
SmartNICs in the Public Cloud

Daniel Firestone, Andrew Putnam, Sambhrama Mundkur, Derek Chiou, Alireza Dabagh, Mike Andrewartha, Hari Angepat, Vivek Bhau, Adrian Caulfield, Eric Chung, Harish Kumar Chandrapappa, Somesh Chaturmohita, Matt Humphrey, Jack Levine, Norman Lam, Farzad Mousavi, Jitendra Patel, Shiva Rajaraman, Aswath Sarode, Mark Shaw, Gabriel Silver, Madhan Sivakumar, Nisheeth Srivastava, Anshuman Verma, Qasim Zuhair, Deepak Bansal, Doug Burger, Kushagra Vaid, David A. Maltz, and Albert Greenberg

Daniel Firestone
Tech Lead and Group Manager, Azure Host Networking Team

Aren't
FPGAs much
bigger than
ASICs?

Not really, within 2x to 3x with
targeted features

Aren't
FPGAs very
expensive?

Not really, compared to CPUs,
DRAM and Flash

Aren't
FPGAs hard
to program?

Not really, hw/sw codesign provides
hw performance with sw flexibility

Can FPGAs
be deployed
at
hyperscale?

Yes, >1m servers with FPGA
SmartNICs deployed

Isn't my code
locked in to a
single FPGA
vendor?

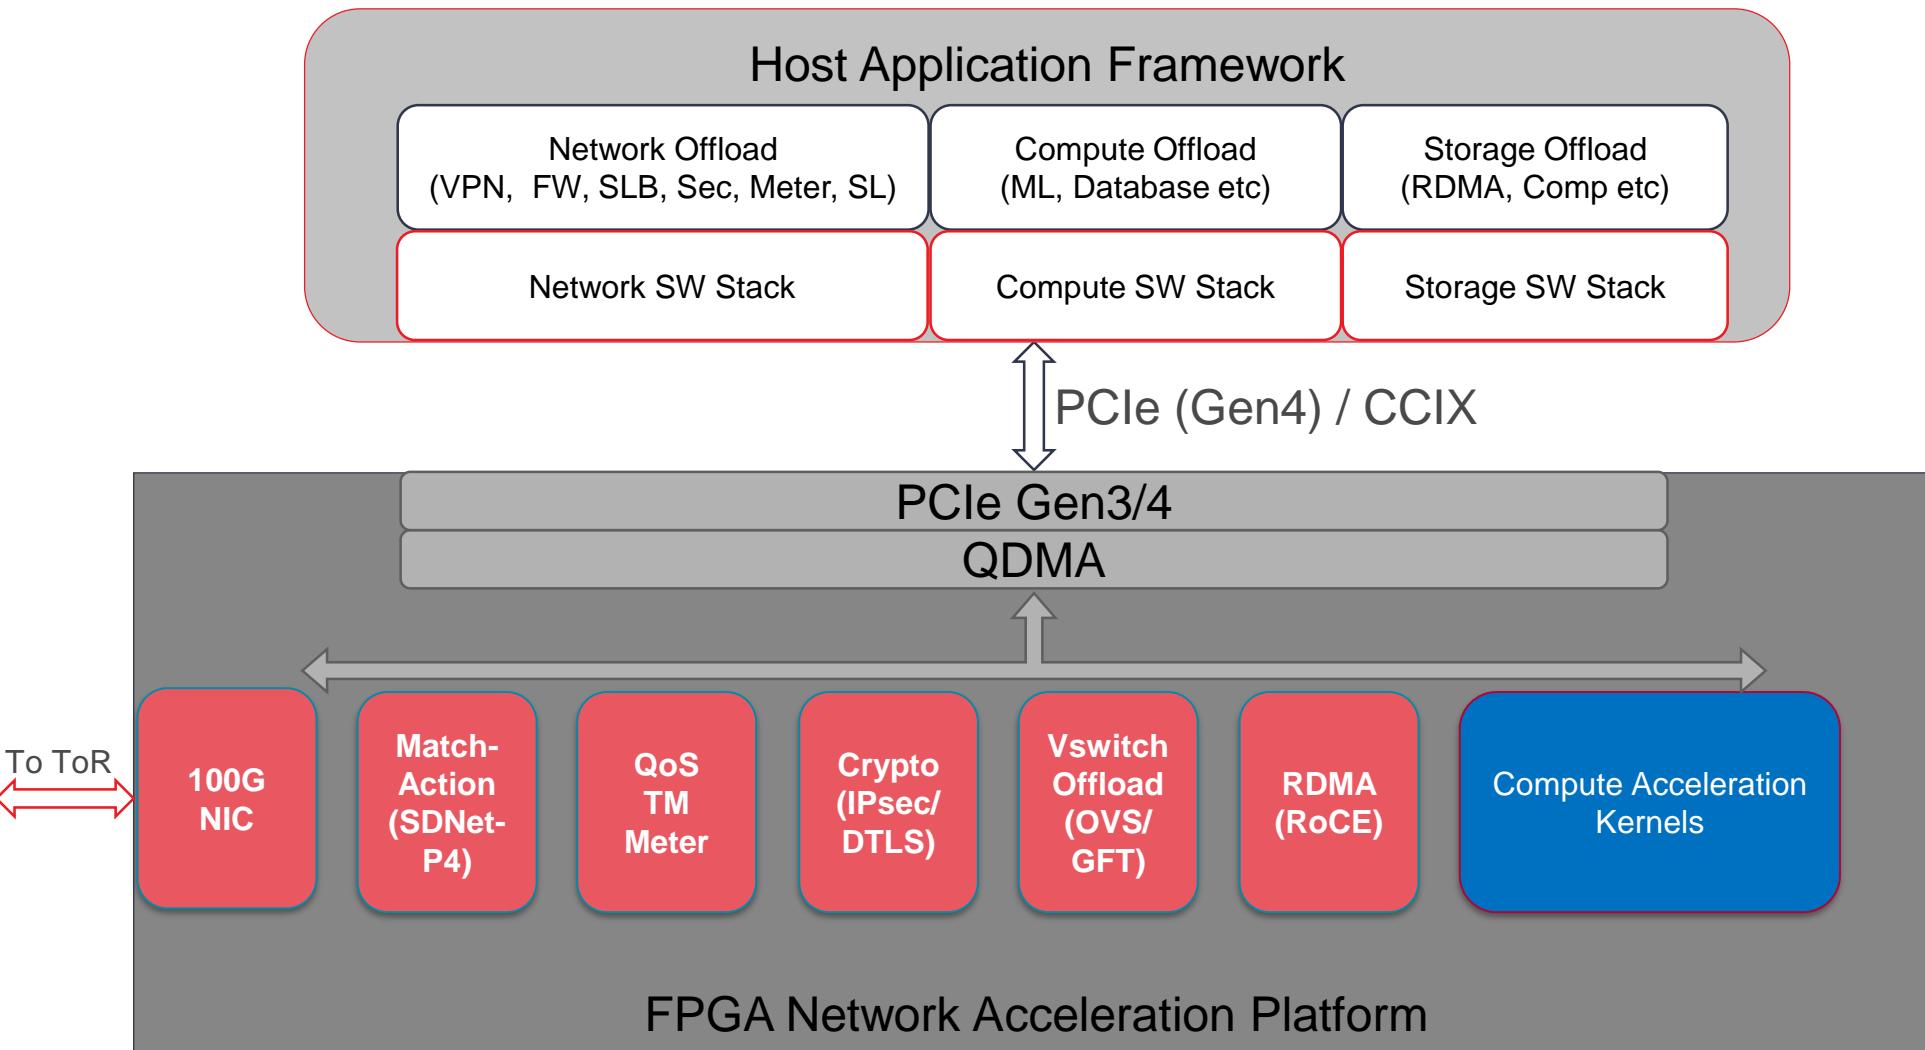

No, Shell-role model allows
portability

Agenda

- > Networking Industry Trends
- > Network Acceleration Platform & Usecases
- > Key enabling IP, Tools & Technology

Network Acceleration Platform

Typical Usecases

Basic Networking

Basic NIC Offloads
(LSO, TSO, RSS,
Checksum)

Tunneling Offloads
(VXLAN, NVGRE)

SR-IOV, MAC/VLAN
Filtering

QoS/Buffering

Network Acceleration

P4/SDNet Programmable
Data Plane

OVS Acceleration

Datapath
Encryption/Decryption/
DPI

In-Band Telemetry and
Monitoring

Storage Acceleration

NVMe, NVMe-oF,
RoCEv2, NVMe-oTCP

Storage Compression,
Encryption, Dedup
(RAID)

Database Key Value
Store and Analytics

SQL Query Acceleration

Compute Acceleration

Machine Learning –
Random Forest, K-means

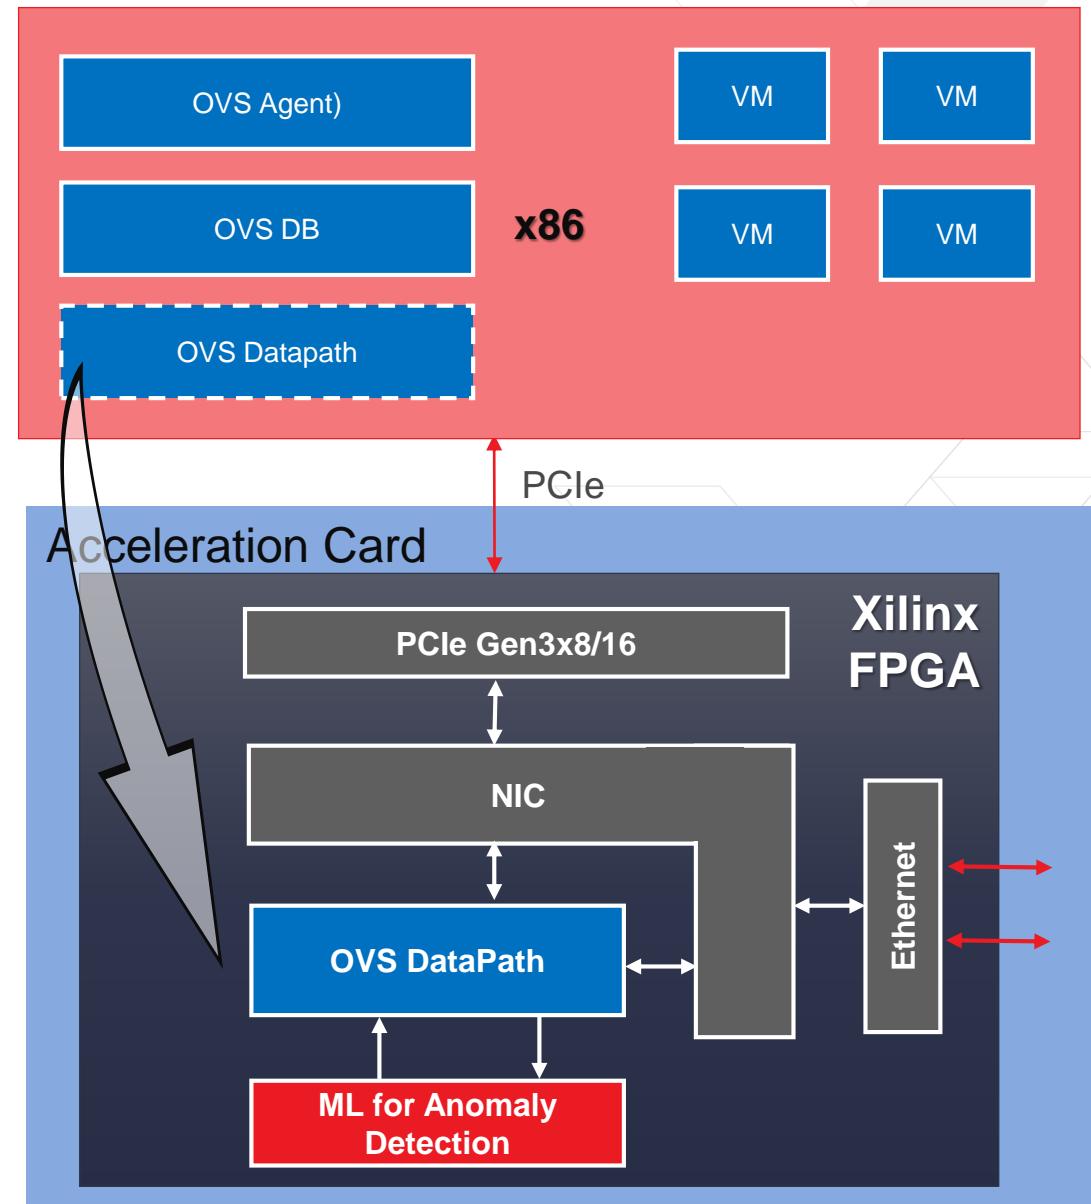

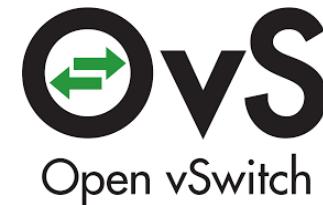

Video Encode, Decode,
Scaling

Deep Learning – CNN
Inference

HPC/Scientific

Usecase - OVS Offload with ML

- > **Problem:** Malware detection on encrypted traffic being switched by OVS
- > **Solution:**
 - » Redirect encrypted traffic to separate ML block for scanning
 - » Feed header fields, packet length, inter-packet gap, packet rate, etc. into ML engine
 - » Use trained decision trees to flag and tag or redirect suspicious traffic

Agenda

- > Networking Industry Trends
- > Network Acceleration Platform & Usecases
- > Key enabling IP, Tools & Technology
 - » QDMA
 - » SDAccel Streaming Platform
 - » SDNet-P4
 - » Typical SoftNIC

PCIe QDMA IP

Converged Host Interface

- Stream, Memory Mapped, Network, Storage

Configurable

- Up to Gen3x16 support

2048 Queue sets

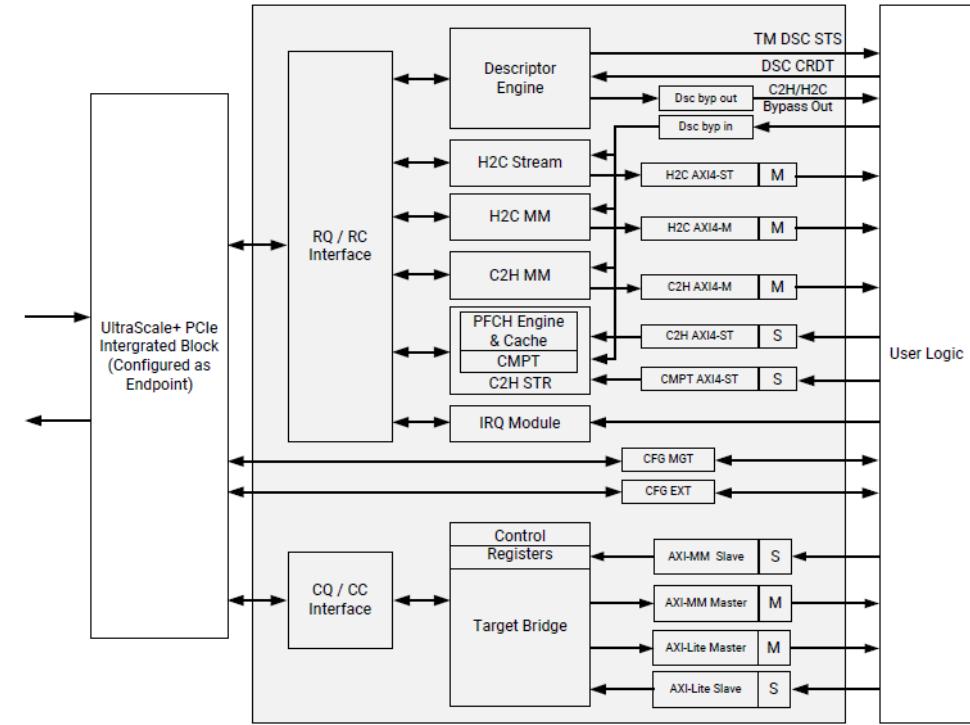

- H2C, C2H, CMPT

SR-IOV Support

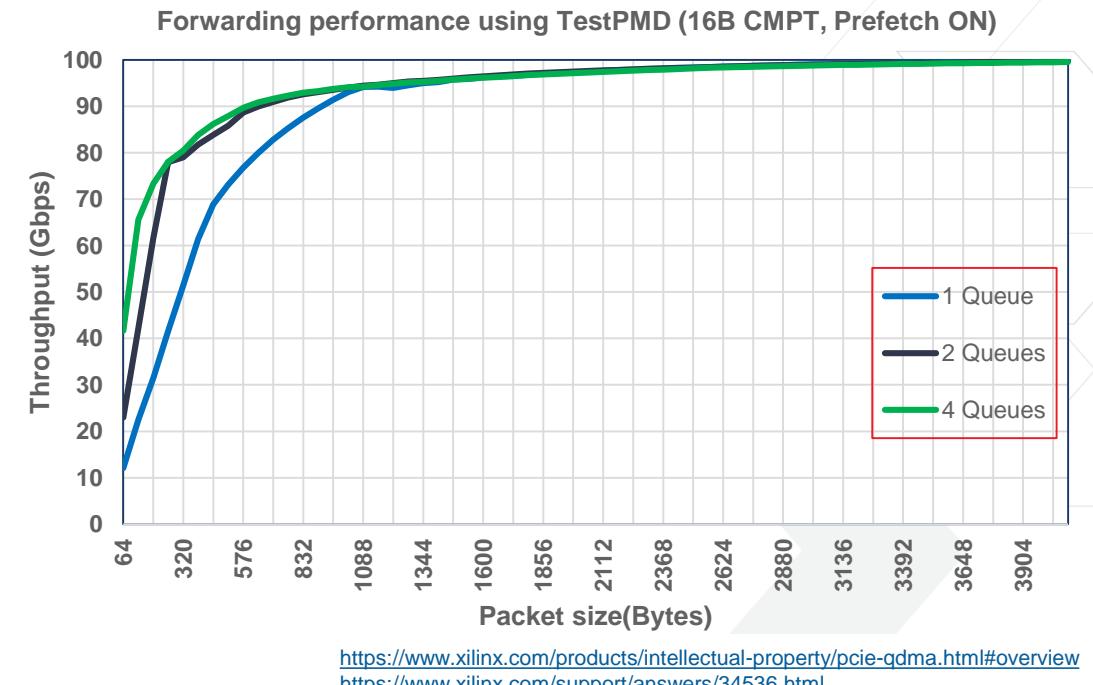

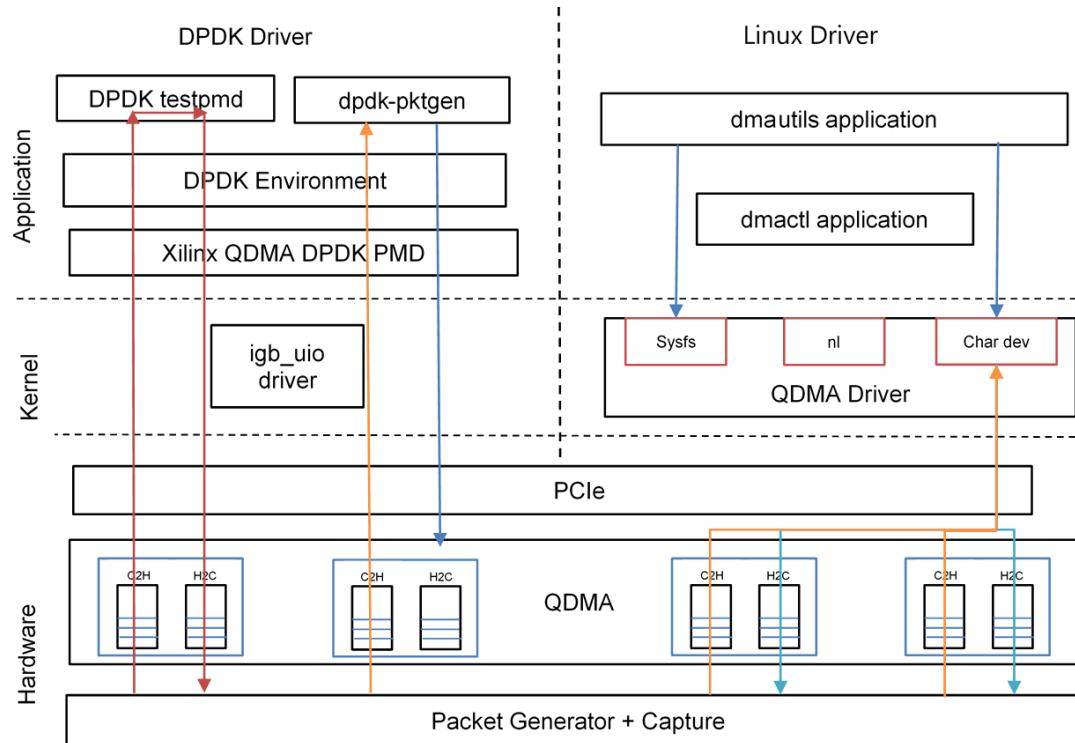

- 4PF, 252VF

Customization with User Logic

- Traffic Management, Virtual Switch, RDMA, NVMe-EP

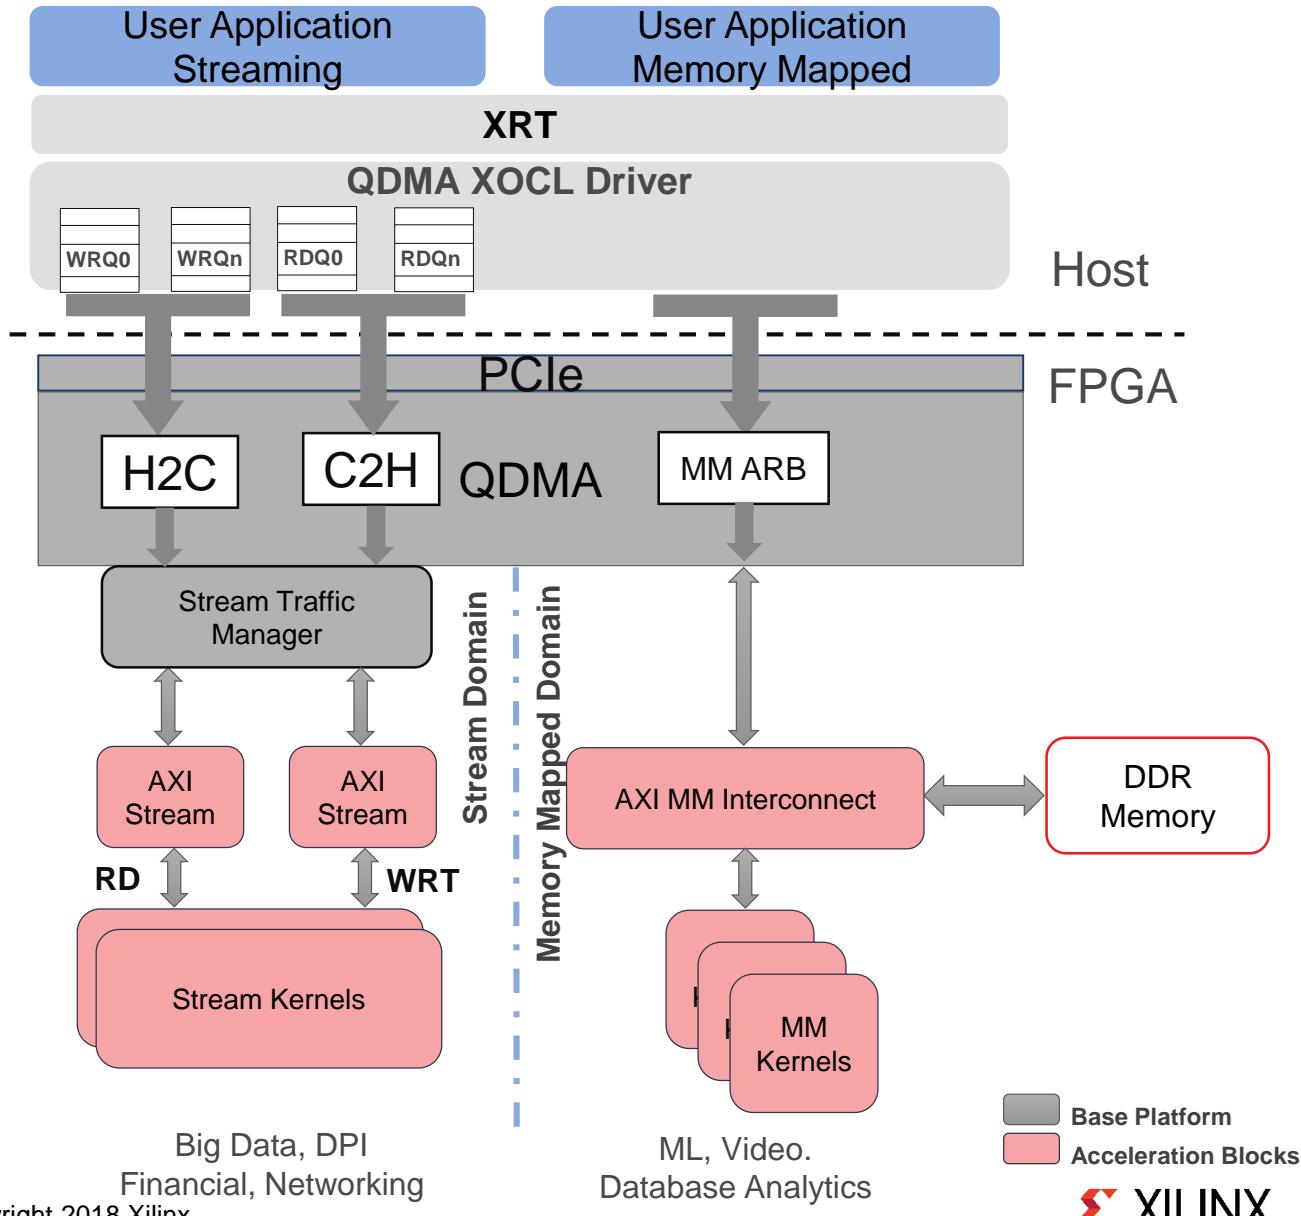

PCIe QDMA IP Performance

Leading edge Small Packet Performance exceeding 95Mpps

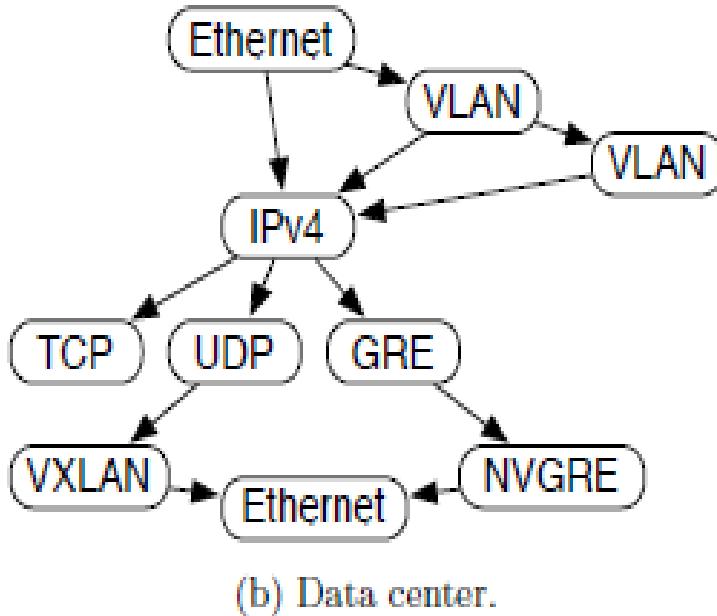

SDAccel Streaming Platform

- > Streaming Platform EA planned for 2018.3
- > Kernels can Rd/Wrt streaming data from Host or to each other
- > Stream Traffic Manager enables multiple streaming kernels

Why SDNet?

Parser in P4: Data Center Usecase Example

```
parser MyParser(packet_in packet,
    out headers hdr,
    inout metadata meta,
    inout standard_metadata_t
    smeta) {

    state start {
        transition parse_eth;
    }

    state parse_eth {
        packet.extract(hdr.eth);
        meta.eth_dmac = hdr.eth.dmac;
        transition select(hdr.eth.type) {
            VLAN_TYPE : parse_vlan;
            IPV4_TYPE : parse_ipv4;
            IPV6_TYPE : parse_ipv6;
            default   : accept;
        }
    }

    state parse_vlan {
        packet.extract(hdr.vlan.next);
        //meta.vlan_tpid = hdr.vlan.last.tpid;
        transition select(hdr.vlan.last.tpid) {
            VLAN_TYPE : parse_vlan;
            IPV4_TYPE : parse_ipv4;
            IPV6_TYPE : parse_ipv6;
            default   : accept;
        }
    }

    state parse_ipv4 {
        packet.extract(hdr.ipv4);
        packet.extract(hdr.ipv4opt, (((bit<32>)hdr.ipv4.hdr_len - 5) * 32));
        verify(hdr.ipv4.version != 4, error.IpVersionNotSupported);
        meta.ipv4_src = hdr.ipv4.src;
        transition select(hdr.ipv4.protocol) {
            TCP_PROT : parse_tcp;
            UDP_PROT : parse_udp;
            GRE_PROT : parse_gre;
            default  : accept;
        }
    }

    state parse_tcp {
        packet.extract(hdr.tcp);
        packet.extract(hdr.tcprotopt, (((bit<32>)hdr.tcp.dataOffset - 5) * 32));
        meta.tcp_seqnum = hdr.tcp.seqNum;
        transition accept;
    }

    state parse_gre {
        packet.extract(hdr.gre);
        packet.extract(hdr.greopt, (((bit<32>)hdr.gre.c_flag * 32) +
            ((bit<32>)hdr.gre.r_flag * 32) +
            ((bit<32>)hdr.gre.k_flag * 32) +
            ((bit<32>)hdr.gre.s_flag * 32)));
        meta.gre_proto = hdr.gre.proto_type;
        transition select(hdr.gre.proto_type) {
            NVGRE_TYPE : parse_nvgre;
            default    : accept;
        }
    }
}
```

P4 enables networking design to be completely programmable, top-to-bottom, soup-to-nuts*

100Gbps Packet Processing with SDNet

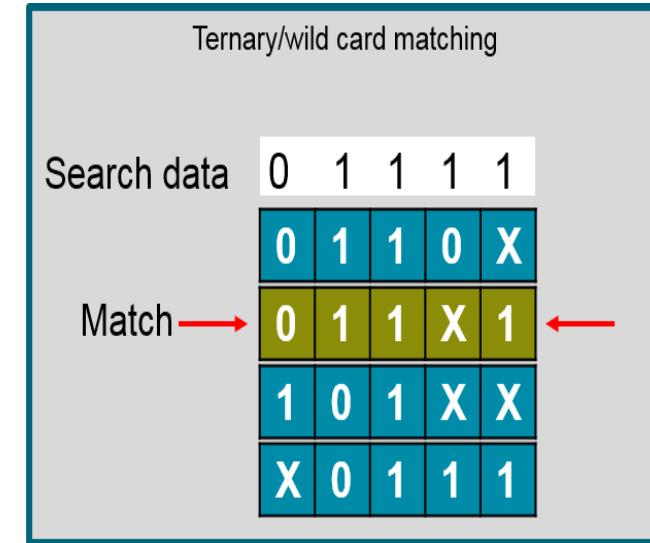

Resource Utilization for standard five tuple example

Tool	Language	Table size	k LUTs	k FFs	BRAM	URAM	Rate
SDNet 2018.1	SDNet – PX	64k EM (64Kx104x16)	19.1	23.7	27	56	100 Gb/sec
SDNet-P4 2018.3	SDNet - P4 (estimate)	64k EM (64Kx104x16)	8K	10K	27	56	100 Gb/sec
SDNet-P4 2018.3	SDNet - P4 (estimate)	Parser only	1.1K	2.5K	-	-	100 Gb/sec

Xilinx Algorithmic Lookup Features

- Exact matching for MAC addresses and flows
- Multi-field wild card matching for ACLs
- Longest prefix matching for IP routes
- Priority decoding for multiple matches
- Ternary and semi Ternary masking
- TCAM capacity of each BRAM = 20Kb, URAM =160Kb

Longest prefix search using ternary matching

IP Prefix (route)	Key	Mask	Prio	Port
10.1.1.1/32	0xA01 0101	0xFFFF FFFF	32	1
10.1.1.0/28	0xA01 0100	0xFFFF FFF0	28	2
10.1.1.0/24	0xA01 0100	0xFFFF FF00	24	3
10.1.0.0/16	0xA01 0000	0xFFFF 0000	16	4
10.0.0.0/8	0xA00 0000	0xFF00 0000	8	4

Multiple matches

Highest priority wins

Lookup Input Key = 10.1.1.3

Lookup Output Port = 2

Multiple matches

Highest priority wins

SDNet Algorithmic Lookup Solution

BRAM/URAM

600 MSPS

20M/Sec inline and
100K/Sec SW updates

40-60 clock cycle latency
(600 MHz)

EM/LPM/ACL :
SDNet 2018.3

DDR

External DRAM based

Millions of ACL/LPM/EM
entries

Integrated with Xilinx DDR
controller IPs

EM: SDNet 2019.1
LPM/ACL: SDNet 2019.2

HBM

Up to 8GB on chip DRAM
for lookups

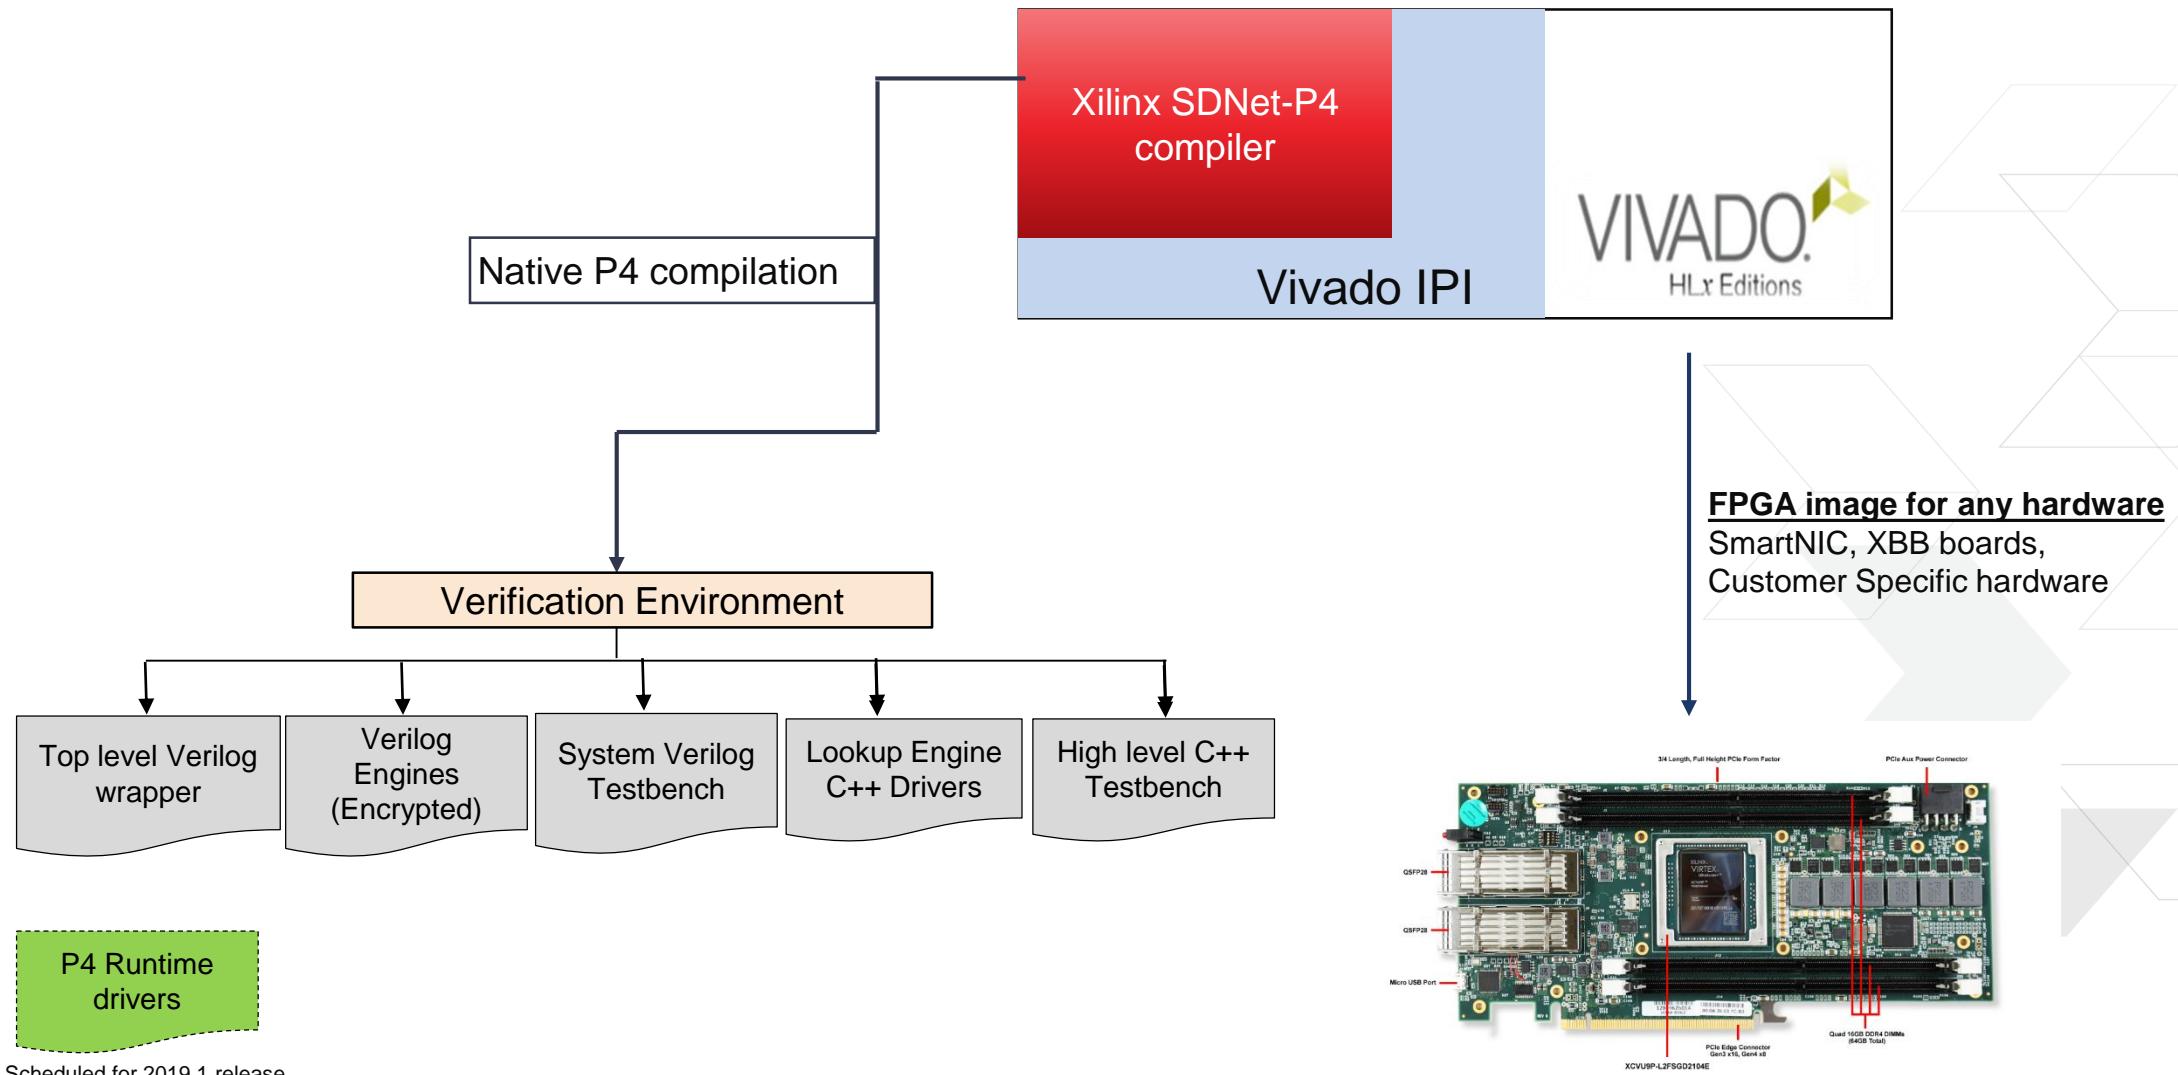

Millions of ACL/LPM/EM

HBM as result memory

EM/LPM/ACL :
SDNet 2019.2

Xilinx SDNet-P4 v2018.3

Scheduled for release in November 2018

SDNet Roadmap

SDNet 2017.3	SDNet 2018.1	SDNet 2018.3	SDNet 2019.1	SDNet 2019.2
<ul style="list-style-type: none">• PX Support• System Builder• VU9P SLRD (VCU118)	<ul style="list-style-type: none">• Minor release• 200Gbps throughput with five tuple design on Ultrascale+ devices	<ul style="list-style-type: none">• P4 as primary development language• New URAM-based Search IPs for<ul style="list-style-type: none">• EM,• LPM• TCAM• 2x-3x better Resource and Latency Improvements	<ul style="list-style-type: none">• DRAM support for EM Search IP• New P4 runtime APIs	<ul style="list-style-type: none">• Search IPs with DRAM (HBM and DDR) for ACLs and LPM• EA Support for 7nm devices

Typical Soft NIC Feature Summary

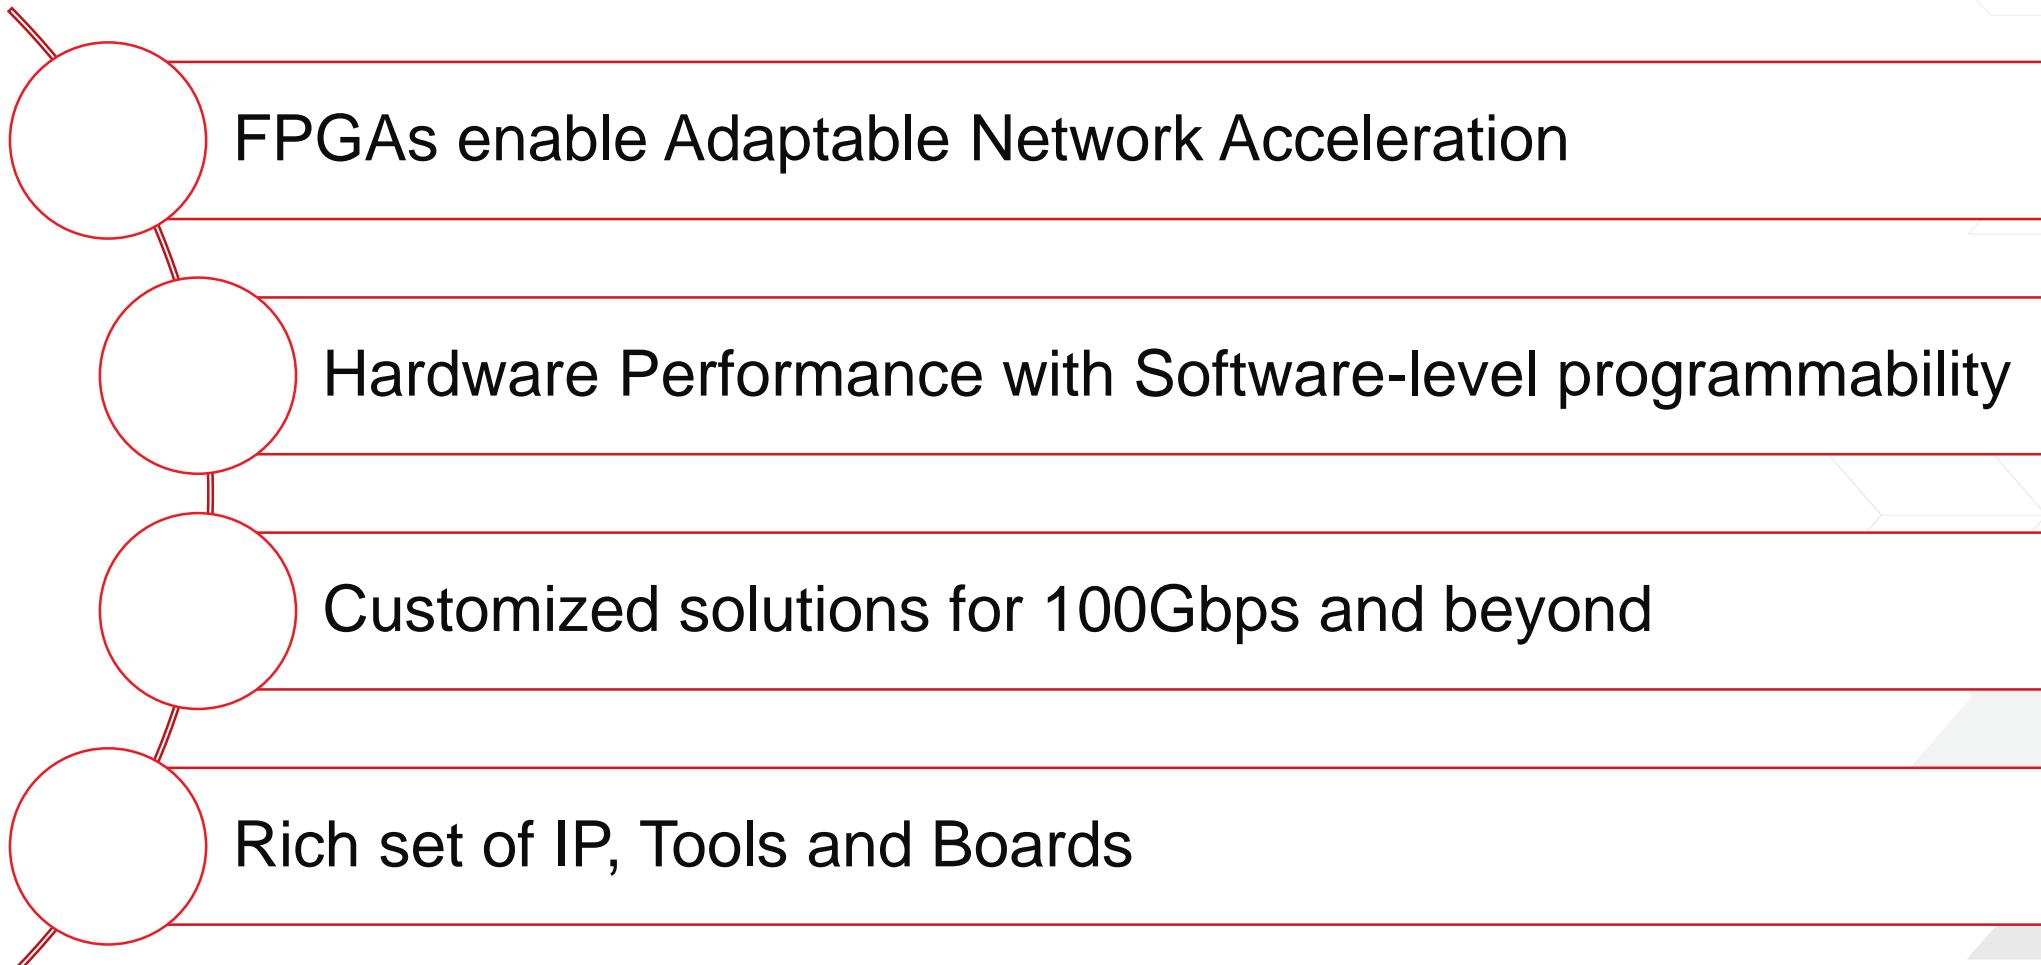

- > SDNet-P4 enables NIC datapath
- > Ethernet
 - >> 100GbE/50GbE/25GbE
- > PCIe
 - >> Gen3x16, Gen3x8
- > OS support
 - >> Windows
 - >> Linux & DPDK
 - >> VMWare
- > Stateless NIC offloads
- > Packet flow steering/Filtering
- > Tunneling offloads
- > Server Virtualization
- > Server Manageability
- > Remote Boot

Summary

Summary

FPGAs enable Adaptable Network Acceleration

Hardware Performance with Software-level programmability

Customized solutions for 100Gbps and beyond

Rich set of IP, Tools and Boards

**Adaptable.
Intelligent.**
